Professional Experience

Unanimity - React.Js Developer

As a team leader I was responsible for planning the architecture, creating and implementing the design, and troubleshooting / debugging an instant messenger application.

- Created data flow between components with redux to allow all parent components to check for authentication.
- Implemented user registration/authentication with firebase database and modern ES8 methods like Object.entries().
- Troubleshot data manipulation errors and heroku deployment complications.
- Designed a warm and welcoming branding that promotes harmony with one another.

Date: March 2020 To November 2020

Stack: React.js, Redux, Firebase, React Router, CSS, SCSS

Github: <https://github.com/Blaine137/unanimity>

PTC BMX - Lead Front-End Web Developer

As the Front-End developer of a volunteer organization website, I designed a easy to use user interface(UI) / user experience(UX).

- Created a mobile friendly website by using Materialize Grid.
- Used PHP to create reusable header, footer, and sponsor sections to keep consistent branding across the website.
- Semantic HTML structure that presents data to users by importance.
- Maintained existing domain authority while redoing the website.

Date: June 2018 To December 2018

Stack: PHP, HTML, Materialize CSS

Georgia Gifts - Full Stack Javascript Developer

Built a fictional ecommerce website for a gift shop with payments through stripe.

- Dynamic data for products on home page, from mongo database.
- Express api that handled endpoints for getting products, login in, and logging out with basic passport authentication.
- React single page application that has unique "page" url through react router.

Date: September 2020 to November 2020

Stack: React.js, React Router, ReactStrap, Node.js, Express, Passport.js, stripe, mongo
